### Yeti Pro Overview:

Yeti Pro is the world's first USB microphone combining 24 bit/192 kHz recording resolution, the highest digital resolution on the market, with analog XLR output. Like the Yeti, Yeti Pro features Blue's premium condenser capsules set in a proprietary triple capsule array, offering the flexibility of four recording patterns. Yeti Pro features a next generation analog-digital converter chip that allows a range of recording resolutions, from 22kHz up to 192kHz and common sampling rates in-between.
