

LAWSON AIR FET MIC

Relive the Magic™

Magic is in the AIR.

Lawson, Inc., manufacturer of the award-winning L47MP and L251 studio tube microphones, enters the realm of voice-over and radio broadcast with the introduction of the AIR microphone.

Original Capsule Design. The AIR microphone features an original and exclusive capsule design by Gene Lawson. Using a variant of the popular L47 capsule, Lawson has created a masterpiece microphone with response shaped for vocal tasks: broadcast, voice-over, radio/TV, and singing. The AIR is a 48 volt phantom powered one-inch large diaphragm cardioid condenser mic with a six-micron gold sputtered diaphragm. The capsule diaphragms have been edge connected rather than center connected for more warmth, robust articulation, and more resonant proximity effects. R-r-r-really **BIG** s-s-sound!

Quick Change™ Capsule. Like all microphones in the Lawson family, the AIR features the Lawson Quick Change™ capsule system that is easily removable and may be plugged into all other Lawson mics, including our popular L47MP and L251 tube microphones.

FET Electronics. Considering radio's fast paced environment and need for rugged, on-the-spot and no-down-time requirements, the AIR's solid state circuit features a Neutrik® transformer, hand-soldered all-discrete

components, and a gold-plated XLR connector.

Simplicity Reigns. The AIR mic was designed with simplicity in mind with no pad or roll-off functions. Go ahead. Eat this mic. It's designed to work up close. You'll find the hyper-cardioid optimization and always-active roll-off quite tasty.

Applications. With its buttery mid-range and toasty highs, your vocals will spread like jam. Whether you're a rock-n-roll DJ on-the-air, a hypnotist recording a relaxing mantra, or a song writer nervously recording your first demo, the AIR microphone will capture that most important instrument, your voice, with amazing realism and vibrancy.

Handcrafted in the USA. We don't say you should buy Lawson microphones because it is patriotic. We say you should buy Lawson microphones because our microphones are handcrafted and hand-inspected by local craftspeople with lots of pride, machined and tested with modern CNC equipment, and built to be the best microphone you'll ever buy. Come see us in action at our new showroom and factory located in Nashville, Tennessee.

LAWSON AIR Features: The Lawson AIR Capsule is precision machined from solid brass, handlapped, and hand assembled with gold sputtered diaphragms in the Lawson lab • Hyper-Cardioid pattern • FET Electronics • Quick Change™ Capsule System • Internally shock-mounted capsule • One-inch 6-micron 24 karat gold sputtered diaphragm • Polished Nickel Brass Head/Machined Aluminum Base

Accessories Included: Shock-proof carrying case • Swivel mic holder

Factory Direct Price: \$895.00

**Measured at a distance of 18 inches. Proximity effect increases when worked closely.*

LAWSON AIR Specifications Summary

Frequency Range	20 to 20,000 Hz
Polar Patterns	Hyper Cardioid
Sensitivity at 1 kHz**	22mV @ 1 Pascal (94 dB SPL)
Max SPL (1 kHz 3%)	138 dB
Equivalent Noise Level	20 dBA
Rated Impedance	150 ohms
Connector	3-pin gold-plated XLR
Dimensions	Mic: 6.5"L, 2.375"D
Shipping Weight	5 lbs.
Power Supply	48V Phantom (1 mA nom)

***Sensitivity can be factory set to your requirements.*
