

W wunder audio™ **CM12/CM7** CLASSIC MICROPHONES

The Wunder Audio™ **CM12/CM12H** Tube Microphone is targeted to the professional with the most demanding criteria. The **CM12/CM12H** uses the larger type Hiller style T14/1 output transformer that was standard in the early C12. The beautiful hand made Capsule is a CK12 style. Pictured is the **CM12H** (*historical*) which uses the vintage-style power supply with a separate pattern-selector box and original-style interconnecting cables. These boutique microphones are hand assembled in Texas per customers order.

- Tubes are hand tested NOS GE 5-star 6072.
- All the capacitors and resistors are of the highest quality available, offering a better low end and S/N ratio.
- High-end Teflon coated Silver wire to wire up the entire mic.
- PSU offers nine polar pickup patterns. PSU's True precision regulation combined with passive filtering, safer for microphone and capsule, RF and Transient voltage protected AC input.
- Point-to-point internal wiring for the audio path.
- Swivel mount is a spectacular piece of craftsmanship itself with the large green jewel.
- Modern power supply also available
- Individual body parts can be sold separately as replacement parts for a vintage C12.

The Wunder Audio™ **CM7** Tube Microphone comes with the early large style U47 transformer that was used in the legendary "Large Badge" U47's. The **CM7** transformer's high nickel content achieves better low end rolling off at 22 Hz instead of 40 Hz. Newly skinned vintage M7 or KK47 capsules are options. Since this is a boutique mic, we also offer several other custom tailored capsules to meet our customer's needs.

- Tubes are hand-selected vintage Telefunken EF14, UF14 or VF14.
- New Tuchel Connectors are used and are identical to the vintage U47.
- High-end Teflon coated silver wire to wire up the entire mic.
- Highly selective array of high-end capacitors, resistors and Mogami audio wire.
- PSU offers true precision regulation combined with passive filtering, safer for microphone and capsule.
- RF and Transient voltage protected AC input.
- Mogami point-to-point internal wiring for the audio path.
- Nickel plated spider shock mounts are available.
- Individual body parts can be sold separately as replacement parts for a vintage U47.

CM7 Tube and Capsule Options
